(a) NCR Admission Timeline (OmniGUI Episode): light = current keep, dark = survives retirement

Prefix contract holds on every step ($S^{\text{hist}} \subset S^{\text{cur}}$) & No token is ever re-admitted

(b) Keep-Map Contrast at $r = 10\%$: Certificate Rescue / Prior Necessity / Honest Failure

"launch the photos app" repair lands the target

"check airdrop setting" prior holds the settings row

"view notifications" both miss (tiny toggle)
